Chapter 2 and 3 interview question

How to create a permanent SAS data set?

In order to create a permanent SAS data set, there are two steps necessary,

- Assign a library and engine.
- Create the data. Make sure to assign both a library (other than WORK) and data set name to make the data set permanent.

What is SLIBREF?

SLIBREF is a server-libref. It specifies the libref that is used by the server to identify the SAS data library when no physical name is determined, and the server libref is different from the client libref.

What is the good SAS programming practices for processing large data sets?

The good SAS programming practices for processing large data sets is to sort them once using firstobs= and obs=.

How to print observations 5 through 10 from a data set?

The FIRSTOBS= and OBS=data set options would tell SAS to print observations 5 through 10 from the data set READIN.

```
proc print data = readin (firstobs=5 obs=10);
run;
```

What are some good SAS programming practices for processing very large datasets?

Sampling method using OBS option or subsetting, commenting the Lines, Use Data Null

Mention common programming errors committed in SAS ?

Common programming errors committed in SAS are,

- Missing semicolon
- Not checking log after submitting program
